Department Representative:

Audit Report №: QAR/MO/20/010

1. MANAGEMENT RESPONSIBILITY

	N/A	Y	N	Note
Has the holder of the Certificate of Approval applied for renewal at least 60 days before approval expires?				
Is AMO approval displayed in a prominent place, generally accessible to the public at such holder's principle place of business?				
Does the MOP contain a commitment statement signed by the AM on behalf of the organization to comply with Airworthiness requirements?				
Does the manual state the names of key management personnel and their positions?				
Does the manual contain a current chart showing lines of responsibility?				
Does the manual contain a statement of the current duties and responsibilities of the key management positions?				
Is there full and efficient co-ordination between department and within departments in respect of airworthiness matters?				

Notes:

2.MPM & QM PROCEDURES

	N/A	Y	N	Note
Is the manual approved by the CAA?				
Are measures taken to ensure that the contents of the manual is understood, implemented and complied with at all levels?				
Does the manual contain a statement of the procedure and responsibility of amendment of the manual?				
Does the manual include notification procedures to the Director General regarding changes in the organization and what changes are subject to notification?				
Is at least one complete and current copy of the manual held at each work location?				
Is there a written procedure to be used when exemption from regulations or concession from manual requirements is needed?				

Notes:

3. PERSONNEL AND TRAINING

	N/A	Y	N	Note
Are the requirements for authorizing / appointing personnel (involved in planning, performing, supervising, inspecting or certifying the maintenance) stated in the MPM / QM?				
Has a procedure or plan for maintaining the competence of personnel been established?(Does the approval holder maintain the competence of its personnel?				
Are personnel in technical departments of sufficient numbers and experienced to plan, perform, supervise and inspect the work and have they been given the appropriate authority?				
Is there a procedure for keeping the technical records of personnel for a period of 2 years?				
Review the personnel records for compliance with requirements. Do the records comply?				
Taxi and Ground Run Authority				
Are the ratings supported by qualified AME's? (Check ratings on AMO license and CAP list)				

Notes:

4. QUALITY MONITORING SYSTEM

	N/A	Y	N	Note
Is the Quality System documented?				
Has the organization designated a person responsible for quality?				
Can the organization show evidence of an internal audit plan and of internal audits conducted?				
Is every, non-compliance, corrected and are actions taken to prevent recurrence of such non-compliance?				
Is there a procedure for management review and overview?				
Are appropriate actions decided at management reviews documented and implemented to maintain an adequate level of conformance to airworthiness?				
Are the auditors suitably qualified?				

Notes:

5. CONTROL OF AIRWORTHINESS DATA

	N/A	Y	N	Note
Is the organization enrolled to receive amendments for all airworthiness data required to support its approvals?				
If the organization depends on customer or other sources for airworthiness data, is this arrangement effective?				
Does the organization hold the latest documentation? (Check documentation holding list with manufacturers revision status list)				
Is there evidence that the amendments received are up to date and are correctly embodied? (Check library documents with the documentation holding list and method of embodiment)				
Is the further distribution of documents by the library satisfactory, where applicable?				
Is the information (amendments) brought to the attention of the persons who need to use it?				
Does the organization have a complete set of AD's affecting the products supported and do the personnel know how to use it?				

Notes:

6. TOOLS AND EQUIPMENT.

	N/A	Y	N	Note
Does the manual describe or make reference to the equipment necessary to perform adequately all functions appropriate to the ratings required?				
Does the manual describe or refer to procedures for the method in which special tools and equipment are used?				
Does the organization have the necessary equipment to support its ratings (capability)?				
Is an up to date inventory of tools and equipment available?				
Are the tools and equipment marked to identify ownership?				
Has a procedure been established to control and, where necessary, calibrate tools and other equipment at a frequency and to a standard to ensure serviceability, accuracy and trace-ability and is this documented in the manual of procedure?				
Are calibration records and verification standards kept for at least 2 years?				

Notes:

7. ACCOMMODATION & FACILITIES

	N/A	Y	N	Note
Does the company have adequate accommodation and facilities?				
Is there suitable accommodation for the proper storage, segregation and protection of the products, parts or appliances concerned and for the materials and supplies to be used and is this documented in the MPM?				
Does the manual contain a statement regarding the standard of cleanliness to be maintained at each maintenance facility? Does the facility comply with the cleanliness standards as required?				

Notes:

8. HANGAR / WORKSHOP

Name / Type of Hangar: No Hangar space, only line maintenance	N/A	Y	N	Note
Are the controlling Manuals available and accessible by every person who needs access?				
Is this kept neat and clean?				
Are the personnel operating within their approval? (Check some personal authorizations)				
Is the maintenance documentation (inspection sheets) available at the workstation and in use? (Completed as work progresses)				
Is the appropriate airworthiness data (Maintenance Manuals, AD's, SB's or other approved data) available at workstation? (Check revision status against library holding list)				
Is the method of controlling copied documents acceptable?				
Is measuring equipment within calibration? (Check equipment in stores)				
Are items removed from aircraft properly stored?				
Are items removed from aircraft properly identified with respect to source and status?				
Have replacement spares been inspected and are these traceable to source?				
Are tools properly controlled? (Check company tools and personal tools)				
In respect of specialized equipment: - Are operating instructions available? - Are personnel trained to use this equipment?				
Is the system for maintenance of line station equipment in operation and effective? Check the following where applicable: - Firefighting equipment - Pressure equipment - Overhead cranes and slings - Aircraft jacks				
Are the safety measures in the hangar adequate? Check where applicable: - Personal safety equipment - Docking equipment and stand - Specialized equipment used in this section				
Notes:				

9. PURCHASING AND STORES

	N/A	Y	N	Note
Does the organization purchase only from reputable suppliers? (Check purchasing records) If a system for supplier control has been implemented, does the company comply with own procedure?				
Does the incoming inspection take place in accordance with own procedure? Is evidence of incoming inspection recorded? Is a trace-ability number allocated and recorded?				
Is access to stores controlled?				
Are parts in the stores correctly identified? (Check match between part number, bin identification, stores inventory)				
Can trace-ability be established for all items stored? (Check trace-ability numbers availability, different batches being segregated) Trace some items in stores to their delivery documentation.				
Are all “shelve life” items controlled by expiry date and on a first in, first out system?				
Is storage of rubber products acceptable? (Check packaging, environment control and rotation of tires).				
If items are returned to stores, is the control system adequate?				
Is the control of unserviceable and repairable items acceptable?				
Is storage of flammable goods acceptable?				
Control of ESD parts – is procedure in place and adhered to?				
Notes:				

10. PROCESS CONTROL AND MAINTENANCE RECORDS

	N/A	Y	N	Note
Does the manual contain the latest scope of work, and does the company limit itself to the approved scope of work?				
Has a capability list been established for work on Categories B, D (other than complete engines) and X?				
Does the manual contain a current description of the relevant documentation to be used and instructions for the completion thereof?				
Can all work performed be traced to the person doing the work?				
Does the company comply with all the procedures for completion of the work performed?				
Does the system allow for an inspector to counter sign upon completion of the work performed?				
Is reference to manuals used entered on all maintenance worksheets?				
Is there a system to ensure AD and SB compliance? Is system used effective? Are recurrent AD's tracked? Is AD listing available as per AMS?				
Is there, where required, a method of tracking life-limited parts on product and is this method effective?				
Are the inspection check sheets used in compliance with requirements?				
Review some logbooks available in the AMO. Are logbooks completed correctly?				
Review some of CRS's issued during the past year. Do these meet the requirements?				
Is Reliability program in place?				
DFDR 12 monthly downloads.				
Pitot Static/ ASI / Altimeter checks – annually				
Duplicate Inspections				
Inspection Reports				
Test flight Procedure				
Fuel flow checks				

Compass swing – 12 monthly				
ELT / battery checks – annually				
ATC Transponder checks – annually				
Aircraft weighing – 5 years				
ECTM Program				
Are maintenance records kept for a period of 2 years?				

Notes:

11. SPECIAL PROCESSES

	N/A	Y	N	Note
Does the company apply any of the following special processes: • NDT • Welding • Heat Treatment • Plating • Bore Scope Inspections Note: use appropriate checklists as available for such processes. IF YES:				
Are the procedures for applying specialized activities documented in the manual of procedures?				
Are the quality control requirements for specialized activities documented?				
Are quality control requirements implemented? • Periodic checks and recording thereof • Safety precautions • Training of personnel				

Notes:
